
Enhancing the Analytical, Planning and Implementation Capacities of Strategic Governance in Regions

Technologická agentura
České republiky

2012–2013

Principal Investigator: Martin Potůček

The project is co-funded by the Technology Agency of the Czech Republic. It is implemented within the OMEGA Programme which supports applied social research and experimental development. Its objectives are to build a cognitive and methodological foundation for enhancing strategic governance processes at the regional level; and to identify the possibilities the Association of Regions of the Czech Republic has for initiating, shaping and coordinating those processes and for providing them with methodological guidance. The project will result in drafting a certified manual of recommended procedures and a methodology for enhancing the analytical, planning and implementation capacities of strategic governance in regions.
